Is589 Chapter 2 & 3 Mini-Case. 1. Classify the two alternatives in terms of what type of application architecture they use. The first suggested solution is a client-based architecture since it's the client that tells the server what data to select to analyze, making the client perform most of the work. The later architecture is a two-tier thin client architecture since it requires an application layer, in this case, a web browser and all processing is done by the server.
