Data Mining Theory Methodology Techniques
One of the most basic techniques in data mining is learning to recognize patterns in your data sets. This is usually a recognition of some aberration in your data happening at regular intervals, or an ebb and flow of a certain variable over time.

Let us understand every data mining methods one by one. 1. Association. It is a method used to find a correlation between two or more items by identifying the hidden pattern in the data set and hence also called relation analysis. This method is used in market basket analysis to predict the behavior of the customer.
